

ALBERTO DI MARIA

Music and Acoustic Engineer

CONTACTS

- dimaria.alberto@outlook.com
- [Alberto Di Maria](#)
- [albedimaria](#)
- [albedimaria.github.io](#)

TECH SKILLS

Languages and Frameworks:

- Python
- MATLAB
- C++

Deep Learning:

- TF / Keras / PyTorch
- Librosa / Essentia

Generative Models:

- VAEs / GANs
- Diffusion / Transformers

Tools:

- Git
- Docker
- AWS (in progress)

LANGUAGES

Italian - native

English - advanced

Spanish - intermediate

French - elementary

PROFILE

MSc graduate in Music and Acoustic Engineering, specialized in **deep learning applied to audio**. Experienced in signal analysis, generative models, and interactive audio systems. Interested in applied research and real-world innovation in sound and music technology.

EDUCATION

Electronical Engineering

Università di Padova - Padua, Italy

M.Sc. Music and Acoustic Engineering

[Computer Science and Engineering]

Politecnico di Milano - Milan, Italy

Further training

Creative Machine Learning – IRCAM / ACIDS

- Course on ML for audio: fundamentals, neural networks, generative models and transformers.
- 2025, online, 10 weeks, score: 96/100.

Generative Music AI Workshop – MTG & Sound of AI

- Workshop on GenAI for music creation with team-based project development.
- 2025, in person, 1 week, certificate awarded.

Audio Signal Processing for Music Applications – uPF

- Course on audio DSP tools for analysis, transformation, and synthesis of musical signals.
- 2025, online, 10 weeks, in progress.

Artificial Intelligence Tutor – AIFIa

- Certification as qualified AI trainer, with advanced GenAI skills and commitment to ethical AI use.
- 2025, online, certificate awarded.

WORKING EXPERIENCE

2023 - 2024

Audio Developer

Anecoica Studio - Berlin, Germany

- Worked on generative audio models, MIR, 3D UIs. Built full-stack prototype using Python React.js, Flask.

2021 - current

Private Tutor

il-Cubo.it - Milan, Italy

- Tutored over 30 university students in computer science and electronics, strengthening technical expertise and clarity in explaining complex concepts.

PROJECTS

- **BEYOND SPACE: RAVE LATENT INTERPOLATION AUDIO SYSTEM** - [github](#)

Tech: Python, PyTorch, Librosa, React.js

Format: solo project

Audio interpolation system using RAVE (VAE-based model), exploring latent manipulation for generative synthesis.

- **DEEP LEARNING FOR MUSIC GENRE CLASSIFICATION** - [github](#)

Tech: Python, TensorFlow, Keras

Format: solo project

CNN and hybrid RNN (LSTM) for automatic genre recognition, optimized hyperparameters, F1-score, and confusion matrices.
